Template breakdown

Summary: S*hort but meaningful title that clearly presents the test case scenario*

ID: *Unique identifier assigned automatically*

Preconditions: *Prerequisites that must be met before the test steps can be executed*

Test steps: *These are the detailed instructions or actions taken to execute the test case, including input data.*

Expected result: *The expected outcome or behaviour that should occur when the steps are successfully executed.*

Priority*: The level of importance or urgency assigned to this case, indicating its relative importance compared to others.*

Labels: *Descriptive tags or categories assigned to cases to help classify and manage them. Current labels include:*

- ET – exploratory test

- FT – functional manual test

- Automation – automated test

- Postman – Postman test

- REST Assured – REST Assured test

- Selenium - Selenium Webdriver testing

Feature*: A feature is a specific, planned functionality or capability within a software application or system that provides a distinct benefit or serves a particular purpose.*

Reporter*: The individual who created the case – Ivaylo Tabakov, Ivan Petkov or Teodora Hristova*

Attachment*: Any supplementary files or documents attached to the issue, such as screenshots or additional information.*
